

Pump spray bottle 1L

Pump spray bottle with 360° spray system

Description

This pump spray bottle is made from high-quality plastic and is ideal for any applications involving repeated use. For example, it can be used to contain fluid for cleaning brakes, bikes or motorbikes. The brass spray nozzle can be adjusted to provide anything from a direct jet to a wide, fine spray. The pressure that builds up in the bottle allows for a sustained, constant spraying process. Thanks to its 360° technology, the bottle can be used in any conceivable position and even works overhead.

Field of application

It is ideal for any situation where constant spraying is required and the relevant sprays and fluids need to be available in larger quantities. Using a pump spray bottle like this is cost-effective and recommended for environmental reasons as it does not require any gas propellant and reduces waste too.

Application

Even after just a few pumps there is enough pressure in the spray bottle to apply the fluid inside

Advantages

- suitable for standard cleaning fluid as well as brake cleaner fluid
- adjustable brass spray nozzle
- made from high-quality plastic
- 360° application
- sustained spraying process possible
