

Wide range of tools and accessories that are precision engineered as the motorcycles you are maintaining

Premium quality tools for precision repairs and servicing

Shouldn't you use service tools that are as precision engineered as the motorcycles you are maintaining?

Bikeservice was founded on that principle by Apo Tool international Ltd and is the leading specialist motorcycle tool company in its field. Bikeservice know that only the finest quality, carefully designed tools should be used to repair motorcycles. Lesser quality automotive tools may have tolerances that can result in damage to smaller and often-fragile motorcycle components.

Bikeservice ensure that their premium quality specialist tools are 100% motorcycle compliant and enable safe and accurate repairs to any motorcycle.

Bikeservice's tool designers believe that the best motorcycle repair tools should be easy to understand, easy to use and fit for purpose. Bikeservice has an ongoing commitment to continue inventing and refining tools specifically for the motorcycle market.

BIKESERVICE TOOLS GUARANTEE

Whilst we expect these tools to last a lifetime they are guaranteed for
3 years in normal use.

Parts designed to wear out are not included in this guarantee, i.e. brushes.

Working on motorcycles is infinitely easier and more enjoyable when you've got room to move around and access to quality equipment, whether that's in a factory workshop or home-built shed. A new range of Bikeworkshop stands, lifts, and tyre changers are exclusive to Bickers and sourced from a leading global manufacturer, and make all motorcycle maintenance even easier for you and your customers.

Ultimate motorcycle protection

Renner accessories originate from a passion and fascination for motorbikes and motorbike sports.

The products are designed to protect the bike against damages in case of a fall. Renner understand your bike is worth a lot for you and have created the Controlled Flexion Area®.

The Controlled Flexion Area® is an Intelligent protection system. The materials chosen and used by Renner are specifically engineered not to bend or break on impact or in a slide. They will resist causing damage to existing threads and will resist potential damage to frame and to engine mountings.

Designed to give any motocross machine that factory look, RazorMX is a new range of accessories available from Bickers. Each component is precision engineered for an excellent fit and finish, and is available in a range of colours to suit a range of manufacturer machines, and includes footpegs, kick starts, throttle tubes, muffler plugs, and bling packs.

Citi top boxes provide added levels of practicality for motorcyclists, whether it's for those commuting in and out of town or for those enjoying a weekend away. With base plates available to fit a wide range of machines, there is a choice of 30 or 32 litres cases to suit all riders.

CRASH PROTECTORS

Renner Protective Sliders are equipped with **Controlled Flexion Area®** - an intelligent protection system designed to ensure that the sliders bend in certain areas to increase bike preservation by redistributing impact force away from the motorcycle frame and engine body.

The **Controlled Flexion Area®** is made up of an aluminium mount slider and **Bolt B**. It has been designed to flex from impact and ultimately break at a maximum force. The maximum breaking force is less than required to damage or twist the bikes mounting points on the frame or engine.

Competitor crash protectors are usually fitted with 1 bolt made of weaker material (8,8 durability class). The long bolt is usually mounted directly on the frame or engine. If you crash this bolt takes the energy of the crash, it can bend and also put the force onto the frame. You may save the outer parts of the motorbike, but you may lose the frame.

COMPETITOR CRASH PROTECTORS

Bolt A = made of strong material
12,9 grade steel, 1080 N/mm² tensile strength

Bolt B = made of weaker material
8,8 grade steel, 640 N/mm² tensile strength

Description:

- High quality specialist plastics used, which are bonded to anodised aluminium mountings
- They not only look great but also afford maximum protection in an accident
- Coloured mountings can add a touch of individual flair
- All materials are specifically chosen by Renner to help safely absorb the energy of an impact while safely slowing the motorcycle in the case of a slide
- Bespoke fitments for most motorcycles
- All fixings and full fitting instructions are included, no additional fixings are needed
- Tested and guaranteed to fit the motorcycle as listed
- Renner crash protectors are bespoke engineered per motorcycle so that the depth of the slider, the fixings included and materials used in manufacture will afford the maximum protection for that model
- All crash protectors fit to and replace original securing bolts and use existing fixing points wherever possible
- Replacement fixings and parts are available from Renner in case of damage
- Controlled Flexion Area®
